# HHI ENP WEBINAR SERIES TECHNOLOGIES IN HUMANITARIAN SETTINGS

## COMMUNITY AND STAKEHOLDER ENGAGEMENT

**TUESDAY, OCTOBER 11 2022, 10 AM EST**

**RSVP HERE!**

**Featuring guest speakers:**

Localization and technological innovation are two thematic areas that have been thoroughly discussed and debated within the humanitarian sector over the last decade. Still, at the convergence of these topics are questions pertaining to how humanitarian actors can develop and implement technologies with the meaningful participation and engagement of people in crisis-affected communities and local organizations. While there has been a lot of vocal support for community and stakeholder engagement, actionable steps to improve engagement have been implemented at a slower rate. This webinar brings together a variety of perspectives to explore how ICT innovations can be developed and implemented with meaningful stakeholder/community engagement, what challenges persist, and what solutions exist.
